# 1. Safety Precautions and Warnings

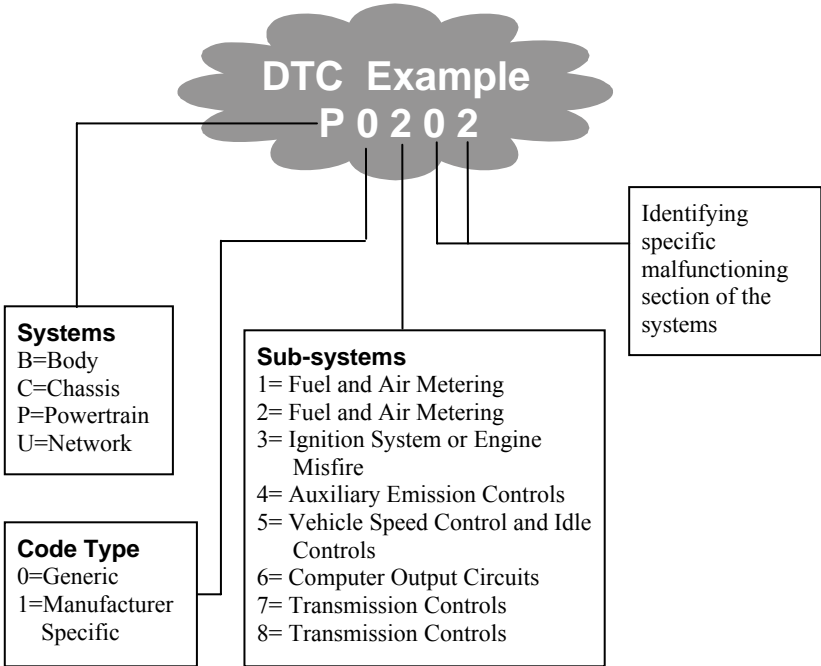

**To prevent personal injury or damage to vehicles and/or the code reader, read this instruction manual first and observe the following safety precautions at a minimum whenever working on a vehicle:**

1. Always perform automotive testing in a safe environment.
2. Wear safety eye protection that meets ANSI standards.
3. Keep clothing, hair, hands, tools, test equipment, etc, away from all moving or hot engine parts.
4. Operate the vehicle in a well-ventilated work area; Exhaust gases are poisonous.
5. Put blocks on drive wheels and never leave vehicle unattended while running tests.
6. Use extreme caution when working around the ignition coil, distributor cap, ignition wires and spark plugs. These components create hazardous voltages when the engine is running.
7. Put transmission in PARK (for automatic transmission) or NEUTRAL (for manual transmission) and make sure the parking break is engaged.
8. Keep a fire extinguisher suitable for gasoline/chemical/ electrical fires nearby.
9. Don't connect or disconnect any test equipment with ignition on or engine running.
10. Keep the code reader dry, clean and free from oil, water and grease. Use a mild detergent on a clean cloth to clean the outside of the code reader, when necessary.

# 2. General Information

## 2.1 Diagnostic Trouble Codes (DTCs)

OBD II Diagnostic Trouble Codes are codes that are stored by the on-board computer diagnostic system in response to a problem found in the vehicle. These codes identify a particular problem area and are intended to provide you with a guide as to where a fault might be occurring within a vehicle. OBD II Diagnostic Trouble Codes consist of a five-digit alphanumeric code. The first character, a letter, identifies which control system sets the code. The other four characters, all numbers, provide additional information on where the DTC originated and the operating conditions that caused it to set. Here below is an example to illustrate the structure of the digits:

## **2.2 Location of the Data Link Connector (DLC)**

The DLC (Data Link Connector or Diagnostic Link Connector) is the standardized 16-cavity connector where diagnostic scan tools interface with the vehicle's on-board computer. The DLC is usually located 12 inches from the center of the instrument panel (dash), under or around the driver's side for most vehicles. For some Asian and European vehicles, the DLC is located behind the ashtray and the ashtray must be removed to access the connector. Refer to the vehicle's service manual for the location if the DLC cannot be found.

# 3. Product Information

## 3.1 About the Code Reader

1. **LCD DISPLAY-** Indicates test results. It is a backlit 2-line display with 8 characters on each line.
2. **READ BUTTON-** Retrieves and Scrolls through Diagnostic Trouble Codes (DTCs) stored in the PCM’s memory.
3. **ERASE BUTTON-** Erases Diagnostic Trouble Codes (DTCs) and “Freeze Frame” data from the vehicle’s PCM’s memory.
4. **OBD II COONNECTOR-** Connects the Code Reader to the vehicle’s Data Link Connector (DLC).

### **3.3 Vehicle Coverage**

The Geniscan OBD II Code Reader is specially designed to work with all OBD II compliant vehicles. It is required by EPA that All 1996 and newer vehicles (cars and light trucks) sold in the United States must be OBD II compliant and this includes all Domestic, Asian and European vehicles.

A small number of 1994 and 1995 model year gasoline vehicles are OBD II compliant. To verify if a 1994 or 1995 vehicle is OBD II compliant, check the Vehicle Emissions Control Information (VECI) Label which is located under the hood or by the radiator of most vehicles. If the vehicle is OBD II compliant, the label will designate "OBD II Certified" . Additionally, Government regulations mandate that all OBD II compliant vehicles must have a "common" sixteen-pin Data Link Connector (DLC).

For your vehicle to be OBD II compliant, it must have a 16-pin DLC (Data Link Connector) under the dash and the Vehicle Emission Control Information Label must state that the vehicle is OBD II compliant.

# 4. Operating Instructions

## 4.1 Reading Codes

**CAUTION: Don't connect or disconnect any test equipment with ignition on or engine running.**

1. Turn the ignition off if it is on.
2. Locate the 16-pin Data Link Connector (DLC) and plug into the Code Reader cable connector to the DLC. Refer to Paragraph 2.2 for DLC location.
3. Wait for the LCD display to read “ GENISCAN OBD II”.

4. Turn the ignition on. But do not start the engine.
5. Press and release the READ button. A “LINK...” message is observed on the display.

- ***If an “ERROR!” message shows up, turn the ignition off for about 10 seconds, check if the code reader's OBDII connector is securely connected to the vehicle's DLC, and then turn the ignition back to on. Repeat the procedure from step 5. If the “ERROR” message does not go away, then there may be problems for the code reader to communicate with the vehicle.***

6. Read the Diagnostic Trouble Codes on the LCD display.
  - If there are no Diagnostic Trouble Codes present, the display will indicate “NO CODES”.

NO CODES

- If more than one Diagnostic Trouble Code is present, the first code number will display on the first line of the LCD display, the numerical sequence of the code and the total number of the codes present in the system will appear on the second line. To view additional codes, press and release the “READ” button to scroll, as necessary, until all the codes have been shown up.

P0055  
01/10

- If the code retrieved is a pending code, a “Pd” will show on the LCD display in the end.

P0005 Pd  
01/05

- To view previous codes, press and release the “READ” button to scroll through to the end, and then scroll starting from the first of the list.
7. Look up part 5 for Diagnostic Trouble Code Definitions. Match the retrieved DTC(S) with those listed and read the definitions.

## 4.2 Erasing Codes

**CAUTION: Erasing the Diagnostic Trouble Codes allows the Code Reader to delete not only the codes from the vehicle’s on-board computer, but also “Freeze Frame” data and manufacturer specific enhanced data. Further, the I/M Readiness Monitor Status for all vehicle Monitors is reset to not RUN or not COMPLETE status. Do not**

***erase the codes before the system has been checked completely by technicians or yourself.***

1. If you decide to erase the DTCs, connect the code reader to the vehicle's DLC if not connected yet.
  - If the code reader is already connected and communication is established with the vehicle's ECM, proceed directly to step 4.
  - If it is connected but communication not established to the vehicle's ECM, go directly to step 2.
2. Wait for the LCD display to read " GENISCAN OBD II".
3. Turn the ignition on. But do not start the engine.
4. Press and release the ERASE button. The LCD display will read "ERASE?" for your confirmation.

5. If you do not want to proceed with erasing the codes, press the READ button to exit.
6. If you do wish to proceed to erase the codes , then press and release the ERASE button once again. A "Link..." message is observed on the display.

7. If the codes are cleared successfully, a "DONE" message will show on the display.

- ***If an “ERROR!” message shows up, turn the ignition off for about 10 seconds, check if the code reader’s OBDII connector is securely connected to the vehicle’s DLC, and then turn the ignition back to on. Repeat the procedure from step 4. If the “ERROR” message does not go away, then there may be problems for the code reader to communicate with the vehicle.***

## 5. Diagnostic Trouble Code (DTC) Definitions

The following Diagnostic Trouble Code Definitions lists provide only Generic Diagnostic Trouble Codes. For Manufacturer Specific Diagnostic Trouble Code Definitions, consult the vehicle's service manual or the enclosed CD software.

***CAUTION: Parts or components should not be replaced based on only a DTC without first consulting the vehicle service manual for more information on possible causes of the fault as well as required testing procedures.***
